

THE FUTURE of GENETIC ENGINEERING

SALMON, POTATOES and NEW GENE EDITING TECHNOLOGIES

**MON, NOV 27
7-9 PM**

Room 303
Dalhousie Student
Union Building
6136 University Ave

*Join us to find out
about new gene
editing technologies
and discuss their
impacts and risks.*

New techniques are opening the door for new genetically engineered (GM) seeds and animals. Are these techniques more precise and predictable? Will they resolve the controversies over GM foods? What about impacts on biodiversity?

Featuring —
Dr. Ricarda Steinbrecher,

biologist and molecular geneticist; Co-director of EcoNexus, UK; Board member of the European Network of Scientists for Social and Environmental Responsibility.
