

May 2019

ALERT

You could be eating Genetically Modified Salmon!

The world's first genetically modified (GM or genetically engineered) fish is now on sale in Canada — **BUT IT'S NOT LABELLED!**

Ask your restaurant and grocery store for a pledge not to sell the GM Atlantic salmon.

The GM Atlantic salmon has been genetically modified with a growth hormone gene from Chinook salmon and genetic material from ocean pout, to grow faster

This is the world's first GM food animal.

There is no mandatory labelling of GM foods in Canada and the company will not say where it is being sold.

Until now, the GM salmon was grown at a pilot plant in Panama, using GM fish eggs produced in PEI.

The GM fish company AquaBounty just got federal government permission to grow the GM salmon in PEI, at a land-based facility in Rollo Bay.

PEI is now home to the first commercial-scale GM salmon factory in Canada, and only the second one in the world.

For information and action see CBAN.CA/FISH
