

STOP GMO GARDEN SEEDS

PROTECT OUR SEEDS FROM NEW GMOS

A new threat to seed savers is looming: For the first time, genetically engineered (genetically modified or GM) fruit and vegetable seeds are being marketed to small growers and home gardeners in Canada.

WHAT'S AT RISK:

- Organic and other non-GMO seed
- The tradition of seed saving
- Preservation of heritage seeds
- Trust in our seeds

ALERT:

Genetically modified "Purple Tomatoes" have been approved for growing and eating in Canada. The GM tomato seeds are already available for home gardeners to purchase from the website of a small U.S. biotechnology company and through some small seed companies in Canada.
